

AI Sales Agent Platform

Overview

The **AI Sales Intelligence & Voice Agent Platform** is an AI-powered sales automation platform that helps businesses discover, qualify, enrich, and engage high-quality prospects from multiple public sources. Instead of manually searching for customer requirements across different platforms, businesses can use one centralized platform to identify opportunities, enrich prospect information, automate outreach, and accelerate sales. The platform combines **AI Lead Discovery, Market Intelligence, Lead Enrichment, AI Voice Automation, CRM Integration, and Sales Analytics** into a single enterprise solution, reducing manual prospecting while improving sales productivity.

Platform & Business Model

Category	Details
Platform	Web App + Mobile App (Android & iOS)
Subscription	Starter, Growth & Enterprise
Pricing	Usage-based for AI Voice Minutes, Contacts & API Integrations

Core Modules

Module	Features
AI Lead Discovery	Discover posted requirements by prospects from LinkedIn, X, Company Websites, Public Directories, CRM & Freelance Platforms. Every discovered prospect is automatically enriched with Name, Business Email, Phone Number (if available), LinkedIn Profile, Company Name & Website, Job Title, Industry, Company Size, Original Requirement Post URL, Source Platform, and Discovery Date . Leads can be searched, filtered, prioritized, segmented, and exported to CSV or Excel.
Lead Enrichment	Company details, verified contacts, job title, company size
Market Intelligence	Funding, Hiring, Technology Stack & Competitor Insights.
Lead Management	CSV/Excel Upload, CRM Import, Data Validation, Duplicate Detection, Segmentation, Search & Filtering.
AI Voice Agent	Outbound & inbound AI calls, prospect qualification, FAQ handling, multilingual conversations, callbacks, voicemail, transcripts, summaries & next-best actions.

🔍 Looking for a SharePoint Implementation Partner 🚨 🔔

We're currently seeking a reliable and experienced SharePoint implementation partner company to support an upcoming project focused on enhancing collaboration, document management, and workflow automation.

📌 Key Areas of Interest:

- SharePoint Online setup and custom application development from scratch.
- Integration with Microsoft 365
- Migration from legacy systems (if applicable)
- User training and post-go-live support
- Strong track record with public/private sector projects

If your organization specializes in SharePoint or you can recommend a trusted partner, please feel free to reach out or drop a comment below. We're looking to move forward quickly and would love to connect with experts who can add real value.

📩 DMs open | Referrals welcome | Let's connect!

Functional Features

Category	Features
Sales	Smart Search, AI Qualification, Campaign Management, Voice Automation
Lead Management	Import/Export CSV & Excel, Filtering, Segmentation
User Features	Authentication, Role Management, Notifications, Activity Tracking
Admin	Users, Subscriptions, Campaign Monitoring, Voice Usage, Billing, Audit Logs
Platform	Secure Authentication, Responsive UI, API-first, Encryption, Scalable Cloud, High Availability

Admin Features

Administrators can manage users, subscriptions, AI voice agents, leads, platform settings, billing, and system monitoring through a centralized dashboard. AI-powered administration includes lead quality monitoring, voice usage tracking, subscription management, audit logs, fraud detection, user activity monitoring, and system analytics to ensure secure, reliable, and efficient platform operations.

Non-Functional Requirements

The platform is designed using a scalable cloud-native architecture with secure authentication, role-based access control, data encryption, API-first development, high availability, fast AI processing, reliable voice calling infrastructure, real-time analytics, seamless CRM integrations, and enterprise-grade security to ensure a secure, scalable, and high-performance sales automation platform.

User Journey

Step Workflow

1. The client registers on the AI Sales Agent Platform through the web or mobile application and starts a free trial.
2. The client provides their company website, company details, business documents, products, and services to help the AI understand their business.
3. The AI researches the client's business, identifies where potential customers publicly post their requirements, and displays relevant opportunities with available prospect details.
4. The client reviews the discovered opportunities and subscribes to Lead Generation, AI Calling, or both based on their business needs.
5. For AI Calling, the client either configures their own calling infrastructure or uses the platform's built-in calling service and provides product or service information for AI-powered conversations.
6. The system validates the products and services to ensure they are suitable for AI selling. If validation is inconclusive, the request is forwarded to an administrator for approval.
7. The client selects target industries, locations, keywords, or global search criteria to discover relevant prospects.
8. The AI continuously discovers public requirements shared by prospects, enriches prospects with company information, available contact details, and links to the original requirement posts.
9. The client searches, filters, analyzes, exports discovered leads, or uploads their own lead list for AI Voice campaigns.
10. The client schedules campaigns based on the prospect's location or time zone, or launches them immediately.
11. The AI Voice Agent conducts multilingual outbound conversations, qualifies prospects, answers FAQs, schedules callbacks (till the call is not received by the prospect), leaves voicemails, retries unanswered calls, and automatically generates call transcripts, summaries, and next-best action recommendations. Once a prospect responds, all further communication is handled by the client.

12. Interested prospects are automatically highlighted, allowing the client to prioritize follow-ups. The client can monitor campaign performance, review AI insights, and repeat campaigns daily, weekly, or monthly as required.

Expected Outcomes

1. Discover high-intent prospects from multiple public sources.
2. AI-powered lead enrichment, scoring, and qualification.
3. Automated multilingual voice outreach.
4. Reduced manual prospecting, qualification, and sales efforts.
5. Higher sales productivity, conversion rates, and pipeline visibility.
6. Increased meetings, customer engagement, and revenue opportunities.
7. Real-time market intelligence for better sales targeting and decision-making.

Important Notes

1. Every application should be **multilingual and support all major languages**, allowing users to access and use the platform in their preferred language for a seamless and inclusive experience.
2. Leads are discovered only from publicly available sources or supported platform integrations.
3. Contact information (email and phone number) depends on public availability.
4. If **contact information is unavailable**, users can connect with prospects through the original source platform where the requirement was published.
5. The platform always displays the original requirement **post URL and source platform** for complete transparency.

Unique Selling Proposition (USP)

Unlike traditional lead generation tools, the **AI Sales Agent Platform** not only **discovers high-intent prospects from multiple public sources**, but also **qualifies who is actually looking for the product/service, enriches, engages, and nurtures** them through **AI-powered multilingual voice conversations**, delivering an **end-to-end autonomous sales workflow** from **lead discovery to conversion** within a **single unified platform**.

Please Note: The features listed in this document represent the **minimum expected functionality**. Teams are encouraged to **identify and propose additional Unique Selling Propositions (USPs), innovative capabilities, AI differentiators, or business value propositions** beyond the features mentioned here to make their solution more innovative, competitive, & valuable.
